# Study of sounds of language Unit 2, Class 7

Pratik Bhandari, PhD

Nepal Center for Cognition and Society nams@nccs.pratikb.com

2025-05-26

### Section 1

## Introduction

#### Reminder

What are the levels of language?

Phonetics

### Reminder

What are the levels of language?

- Phonetics
- Phonology

#### Reminder

What are the levels of language?

- Phonetics
- Phonology
- Morphology
- Syntax
- Semantics
- Pragmatics

#### **Phonetics**

#### Study of speech sounds

- Articulatory phonetics: production of speech sounds
- Acoustic phonetics: physical properties (e.g., properties of sound waves)
- Auditory/perceptual phonetics: perception of speech sounds

 $Production \rightarrow Transmission \rightarrow Perception/interpretation$ 

# Articulatory phonetics

• How is aerodynamics converted into speech sound?

Organs of speech production

Consonants, vowels, dipthongs... ... ...

# Acoustic phonetics

- What are the physical properties of speech sound?
- RMS amplitude of a waveform
- Fundamental frequency
- Time-frequency analysis
- Signal processing

and so on.

## Auditory phonetics

- Hearing speech sounds and speech perception
- Relationship between speech stimuli and listeners' perception
- Perception mediated by sensory processing and central & peripheral auditory system

### Section 2

# Speech production

# Organs of speech production

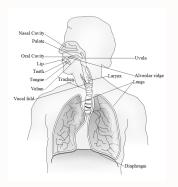

Figure 1: Speech production organs.

# Organs of speech production: closer look

Figure 2: Principal organs of speech production.

- Nasal cavity
- 2 Lips
- Upper incisor teeth
- 4 Hard palate
- Soft palate (velum)
- Masal pharynx

- Tongue tip (apex)
- Tongue blade
- Tongue root
- Oral pharynx
- Laryngeal pharynx
- Vocal folds

## Process of speech production

- Initation: Respiration diaphragm, intercostals, trachea, and lungs
- Phonation: Vocalization larynx, glottis, vocal folds
- Articulation: Tongue, lips, lower jaw, velum, teeth, alveolar ridge, hard palate, uvula
